

1. Edpuzzle

- <https://edpuzzle.com/content>
- This website allows the teacher to make assignments with videos found on the internet. I would describe this site as being a “central hub” for teachers to find educational videos to use along with their assignments. It reminds me of google classroom in a way, but without the ability to write documents. This site has a gradebook for the teachers to keep up with the students scores on assignments. It also gives teachers the ability to assign work or homework to their students. There is an option for a due date as well which helps the student know when they should have their work turned in.
- I plan to integrate this site into my lesson plans by using the videos as a teaching tool along with my teaching notes. If I do obtain a job as a science teacher, I could use the videos as a teaching tool. I know that not all students learn the same, but I do think that most children learn by watching.

2. Kahoot

- <https://kahoot.com/schools-u/>
- This website is a great interactive website. It allows the teacher to make games using the materials that their students have learned or need to learn. It is also great for getting to know your students and for your students to get to know you. Teachers and students can make questions about themselves and have others answer those questions.
- I plan to use this website for my students to help them learn the materials necessary to grow their knowledge. I would use this for game days and for the beginning of the school year. I would let my students make their own to share with the class so that everyone would get to know them. I would also make one, so they would feel more comfortable knowing a little about me. It would make a great ice breaker.

3. Flipgrid

- <https://info.flipgrid.com/>
- This would be a wonderful addition to the classroom. This website allows the teacher to record and share videos with their students. One thing that makes this different from others is that the teachers screen can be shared, there are many backgrounds that can be used, and text can be done on the video.
- I would use this website to make videos for my students in the event that there was a pandemic such as now. I really think that I would use it in other cases such as if I was to miss and the students needed instruction and I knew that the substitute may not understand the instructions. I could use this in lessons by making a cartoon type of video or by uploading videos from other sources and collaborating it with mine.

4. Word wall

- <https://wordwall.net/>
- This website gives many options to teachers. There are options for games (single and multiplayer), quizzes, printables, many themes and options, the ability to give assignments to students, and it gives the ability to share what you have created.
- I would use this for learning lessons. This would be a great way to get my students excited and motivated to learn. I believe it would also help them to remember what they are learning. If a student is like a robot when they are learning new things, chances of them retaining any of the information they are learning are slim.
- <https://wordwall.net/play/7859/066/642> (enter your name and you will be able to begin the game and answer the questions.
- <https://wordwall.net/myactivities> (this link will let you see what I have done, but not make you play the game right away like the one above.)
