

Educational Software Write Up

Evaluators: Teagan Russell, Madison Martin

Title: Big Math Flash Cards

Version: 2.2

Publisher: Masato Takagi

Target Audience: Ages 4 & up

Use in curriculum: When working on multiplication/division/addition/subtraction problems with your students, this app is a great substitute for paper flashcards!

Cost: Free, but in-app purchase includes a bundle for all the app has to offer for \$2.99

Describe the software: Just like a real flashcard! With just a simple tap, you are able to flip the card from the question to the answer.

Describe your impressions on the software: We believed that this app is just the bare minimum we would expect in a flash card app. We wish there were more bells and whistles, more customization tools, etc. We enjoyed how the flash card gave the student a chance to answer for themselves, instead of just automatically giving them the answer.

Does it pass APPS? Yes.
