Educational Software Write Up

Evaluators: Teagan Russell, Madison Martin

Title: Mimo: Learn to Code

Version: 4.0

Publisher: Mimohello GmbH

Target Audience: Ages 4 & up

Use in curriculum: For a Kindergarten classroom, we believe that it would be difficult to incorporate it into the classroom. Although, it is very kid-friendly, and provides step by step instructions. If we were learning specifically about coding in the classroom, this app would be an amazing learning tool for that.

Cost: Provides a 7-day free trial$59,99 a year after the trial is up.

Describe the software: With Mimo, you receive your own personalized learning path of bite-size exercises that fit into your daily routine and keep you motivated. With this app, you are learning how to code, make apps, games, websites, and more.

Describe your impressions on the software: We enjoyed the app, and how it gave directions for each part. This app seems like it should be aimed at higher grades, considering that coding is a difficult skill. We also enjoyed how in the beginning, there was an option for students to choose how comfortable they were with coding. The app then took this information, and created a personalized lesson. We wish that there were more options for free, instead of requiring you to pay for most of them.

Does it pass APPS? Yes
