

Educational Software Write Up

Evaluators: Teagan Russell, Madison Martin

Title: QR Code Reader

Version: 2.3.3

Publisher: TinyLab

Target Audience: Ages 4+ (We disagree. We believe that it should be aimed at higher ages.)

Use in curriculum: This app could be used for my students in order for them all to get to a certain website within class time. Instead of providing them a large URL, I can simply provide a QR Code created by the app, and the students can use the app to scan the QR Code, and then locate the URL.

Cost: 3 Days free, afterwards \$7.99 a month.

Describe the software (enough to visualize): A QR Code reader that has the ability to scan QR codes, create QR Codes, and keep up with past QR Codes scanned.

Describe your impressions on the software: (good and bad aspects)

We enjoyed how simple it was to scan a QR code, and how it took you to the designated space efficiently. We also enjoyed how on this one single app, you can scan, create, and keep up with the past QR Codes that you have scanned. The one thing that we did not like, was how you had to pay for it. There are plenty of QR Code readers on the app store that are free.

Does it pass APPS? No
