

Educational Software Write Up

Evaluators: Teagan Russell, Madison Martin

Title: WorldCraft: 3D Build & Craft

Version: 3.4

Publisher: Playlabs, LLC

Target Audience: Ages 4

Use in curriculum: With this, we can teach students what to do in real life situations, by teaching them how to solve problems that they may face. With this game, it will test their brains.

Cost: Free, coins for the game cost (depending on how many coins you are purchasing.)

Describe the software: A app with fun survival crafting and building games. Create your own world. "Enjoy survival: craft, mine, build survive,"

Describe your impressions on the software: We enjoyed how students would be able to customize their own character, and build whatever they would like in their own world. The problem solving aspect is nice also, putting students to the test to use their brains. We wish that there was more educational value to the entire thing.

Does it pass APPS? Yes.
