

Mini Lesson: Telling Time

1. Grade: Kindergarten
2. Curriculum Topic: K.MD.C.5 Read Time to the hour on digital and analog clocks
3. Tools: YouTube and Interactive Clock
4. Synopsis: I will begin this lesson by having an anchor chart that dissects the parts of the clock such as the hour arrow and minute arrow etc. I will then play [this video](#) that explain how to tell time on an analogy clock. After the video plays, I will ask the students questions about the information presented in the video. I will also break down what was said so they begin to understand how to read a clock. I will then present the class with an interactive clock that will allow them to learn for themselves how to read a clock. I will make the clock display a certain time and I will ask the students what time it says. I will also ask how they know that is the correct time. We will continue with this activity until the desired understanding of reading a clock is reached.
